The World's Edition

Universal Method

for the

Saxophone

by

Paul de Ville.

The largest and Most Complete Method ever written for the Saxophone.
Based upon the celebrated works of

A. MAYEUR, H. KLOSE, and others.

And containing the complete fingerings for

The Latest Improved Saxophones

Price Paper
$3.50

Price Cloth
$4.75
HE Author takes great pleasure in stating to the Student, that everything which patient research, practical experience and knowledge (of my favorite instrument) could suggest, has been brought to bear to make this the greatest and most comprehensive Method for the Saxophone ever attempted.

The plan of study is thorough and progressive, and if strictly adhered to, cannot fail to produce a first-class performer.

Yours truly,
Paul de Ville

The Universal Method for the Saxophone
By Paul de Ville.

The Saxophone was invented about the year 1844, by Adolph Antoine Joseph Sax. He was the son of Charles Joseph Sax, the celebrated musical instrument maker of Paris, France.

Since the instrument was first invented, it has been greatly improved, and now—thanks to the skill of Messrs. Evette and Schaeffer, Paris, France, it has developed into the Saxophone as we know it to-day.

The body of the Saxophone, a parabolical cone, is made of brass and provided with a set of keys.

The mouthpiece is similar to that of the clarinet, and is fitted with a single reed.

The fingering of the Saxophone is similar to that of the Oboe, a clarinetist can readily master same after a little study.

The tone of the Saxophone is soft and penetrating in the upper register, and in the lower register it is full, rich and profoundly impressive.

One great merit of the Saxophone is its nobility in sustaining singing tones. Its tone is richer and has far more volume than the clarinet, and it has an extraordinary range of swell from soft (pp) to loud (ff).

The full harmony of a quartet of Saxophones produces a grand effect.

In brief, the tone of the Saxophone is peculiar to itself, presenting vague analogies with the tones of the 'cello, clarinet and oboe.

The Saxophone is now an indispensable instrument in bands, and also fills an important place in large orchestras.

Saxophones are being made in many different sizes, and are classed in two series:

Series A.
Soprano Saxophone in F
Soprano Saxophone in C
Alto Saxophone in F
Tenor Saxophone in C
Baritone Saxophone in F
Bass Saxophone in C

Series B.
Soprano Saxophone in Eb
Soprano Saxophone in Bb
Alto Saxophone in Eb
Tenor Saxophone in Bb
Baritone Saxophone in Eb
Bass Saxophone in Bb
Contra-bass Saxophone in Eb

The first series (A) is for orchestral use, and the second series (B) for the military band. Saxophones, when they are used in military bands, are generally employed in choirs of four, each of a different pitch, as follows:

A Bass in Bb and Contra-bass in Eb are sometimes used, and (though very rarely) a Soprano in Eb.

It is now quite common to see in Saxophone quartets two Alto Saxophones in Eb used, one taking the part of the Soprano in Bb.

The Saxophone used most as a solo instrument is the Alto in Eb.

INSTRUCTIONS FOR THE SAXOPHONE.

The compass of the Alto and Tenor Saxophones is two octaves and a major fifth.

The compass of the Soprano, Baritone, Bass and Contra-bass Saxophone is two octaves and a fourth.

On the old model Saxophone the lowest note was:

The music for all Saxophones is written in the treble clef.

HOW TO HOLD THE SAXOPHONE.

The Soprano Saxophone is held in the same manner as a clarinet. The Alto, Tenor, Baritone, Bass and Contra-Bass are held, with the lower part or bell of the instrument resting against the right leg of the performer, but not too much on the right side, for in this position the left arm is stretched and the right arm is bent, thus interfering with proper execution, and also tiring the arms.

The right thumb should be put below the support, to hold the instrument in position, but not to hold it up; the strap will do that. Especially avoid resting the instrument on the thumb, for this tires and paralyzes the fingers.

The thumb of the left hand, supported on the round mould, will at the same time be in position to use the two octave keys, and in order to be able to use these two keys, the thumb should always rest in the same position, this is very important for equality of fingering.

POSITION OF THE PERFORMER.

In sitting or standing, the body must be erect, head up and steady.

The chest must be well expanded, which facilitates the action of the lungs and allows the performer to bring out sounds both long and well sustained.

The arms should fall naturally along the body.

The hands must be held without contraction or rigidity upon the instrument; the fingers must be
arched and fall rather than strike upon the plates and keys.

The fingers must NOT rest on the plates or keys, as this interferes with smooth execution. With fingers flat, instead of being arched, one cannot properly take the G sharp, C sharp, B natural and low B flat keys, the left little finger is necessarily raised, whereas with the fingers arched on the plates, the little finger takes a good position, and easily commands the above notes.

Touch the keys with the tips of the fingers.

**APPEARANCE OF THE PERFORMER.**

When performing before an audience bear a calm appearance, emit the sounds without showing externally the difficulties that have to be overcome; it will greatly impress those around you with the apparent facility of your execution.

On the other hand, it would offer the company some temptation to laugh if you were to move your head, balance the body, raise the shoulders as a mark of expression, or fill up your cheeks with wind.

**POSITION OF THE MOUTHPIECE IN THE MOUTH.**

Insert about one-third of the mouthpiece into the mouth, the reed being underneath. The lower lip should be a little drawn in, so as to cover the teeth; and the upper lip slightly pressed downward, to prevent the teeth biting the mouthpiece and damaging the quality of tone. The mouthpiece being thus held by a light pressure of both lips the air cannot escape by the sides of the mouth, the reed can then act freely and perform its vibrations with all desirable facility. The tone on the Saxophone is produced by the tongue, which sends the air into the instrument and at the same time causes the reed to vibrate. To produce a tone the player must take in a sufficient quantity of air and force it into the instrument by a short stroke of the tongue and by pronouncing the letters T or D or the syllables "Too" or "Doo", according to the quality of tone required. Strike the reed about half an inch from its top (or thinnest part), with the tip of the tongue.

**THE REED.**

Great care should be taken in choosing a reed, as the quality of the tone depends upon the reed.

When the reed is "hard" and the mouthpiece open, the quality of tone is very bad.

In the low notes the tone is loud and hoarse; in the middle notes it is husky, and in the high notes it is thin and the notes are false.

When the reed is "soft" and the mouthpiece closed, the notes have the tone of a reed pipe and becomes low, and if one wants to raise them the reed hugs against the lay of the mouthpiece and there is no sound.

On the other hand, when the mouthpiece is a little open and the reed of medium strength, you can regulate the tone, diminish or increase it at will, and all the notes are smooth and in tune, and the tone is full, even and mellow in any of the registers, low, medium or high.

A proficient student will soon be able to choose a proper medium, and also, perhaps, learn to "touch up" his reed by judicious manipulation, to get it to speak easily, with a full yet sweet tone.

Reeds are made of Frejus cane, which must be ripe, but not overripe. For a Baritone and Bass Saxophone a softer reed will be better; while for the Soprano and Alto a more substantial one will be preferable, with a medium for the Tenor.

The reed of the Saxophone being large and flexible, too much pressure closes it, therefore a slight pressure only is necessary to produce high notes, contrary to the effect on a Clarinet.

**MANNER OF CONTROLLING THE TONE, ETC.**

The control of the tone consists, first, in sustaining with strength; second, in emitting it softly and husbanding it; third, in increasing and diminishing the tone without altering its pitch.

During the emission of the air the tone must be equal, the same at the end as at the beginning. When the lungs are filled the tone is naturally stronger at the beginning, afterwards weak. This must be guarded against by reserving sufficient breath for the end.

It is of the greatest importance to have a good mouthpiece and a good reed, without these the student will try in vain to produce a sweet tone.

**BREATHING.**

Taking breath at the right time is an important matter. Every melody consists of sections which may be compared to the separate clauses of a sentence, and as these are indicated by punctuation so the sections of melody ought to be marked by the taking of breath at the correct moment. This should be done very rapidly, without noise, and without opening more of the lips at the sides of the mouthpiece of the instrument than is requisite for the inhalation of the breath. The face of the performer should give no sign of the action, and the more imperceptibly it is done the better. Every breath taken should be a deep one, completely filling the lungs, so as to enable the performer to play long sections without a break.

In the exercises in this method the place where breath is to be taken is marked by this sign (') over the stave.

The management of the breath is, like the flexibility of the fingers, a matter of practice—difficult at first, but acquired by persevering study.

**HOW TO PRACTICE.**

Practice as near as possible one regular time each day. For it is better to do so, if only for a short time regularly, than to practice for a long time one day and neglect it for two or three.

**The Scales.**—Whatever time the student can devote to practice, at least one quarter of that time should be devoted to the practice of the major, minor and chromatic scales.

Study intelligently, that is to say, DO NOT play the exercises too quickly, always follow the rhythm, give each note its full value, keep the pitch of each note well up, attacking it freely and sustaining it to the end. The pupil should practice daily long sustained tones, taking successively every note of the chromatic scale. This study will impart a beautiful tone, form the embouchure, and give roundness in playing.

As the pupil progresses with the following studies he will find additional instructions at various points which he must carefully observe.
GENERAL REMARKS.

The Strap bears the weight of the instrument, not the thumbs.

The fingers must be arched, and the keys touched by the tips of the fingers.

The mouthpiece must be carefully cleaned after playing.

The pads should be kept in good order, and the springs of the keys oiled occasionally.

The instrument should always be wiped after using to prevent verdigris forming, and a piece of linen or cotton cloth passed through the crook to which the mouthpiece is attached.

The performer must be very careful and not allow the pads to remain damp after using the instrument. For when the pads are wet and are allowed to dry of their own accord, they become hard and do not cover the holes, which makes the instrument very difficult to play, also lowers the pitch and puts the instrument out of tune.

TAKE CARE TO AVOID THE FOLLOWING FAULTS.

1. Wasting of the breath.
2. Spluttering with the tongue.
3. Direct breathing with the chest.
4. Uncertainty of tonguing, i. e., unsteadiness of tone.
5. Nodding with the head, which disturbs tonguing.
6. Loud, audible breathing when one or more sounds are being blown.
7. Swaying motions of the body, especially of the arms, which interferes with the fingering.
8. Beating time with the foot; in short, whatever interferes with exact and easy execution agreeable presence, good position of the body, etc., must be carefully avoided.
List of the Principal Words used in Modern Music
With their Abbreviations and Explanations

A.

Accelerando (accel.). Gradually increasing the speed

Accident: Emphasis on certain parts of the measure

Adagio. Slowly leisurely

Ad libitum (ad lib). At pleasure; not in strict time

A due (à d.). To be played by both instruments

A tempo. To return to the measure.

Al or Alla. In the style of

Ala Marcia. In the style of a March

Allegretto. Diminutive of allegro; moderately fast, lively; slower than andante; quicker than allegro

Allegro. Lively; brisk; rapid.

Allegro assai. Very rapidly

Allegretto. Affrettando, relatively slow time

Andante. Diminutive of andante; strictly slower than andante, but often used in the reverse sense

Animato. With animation

A piccato. At pleasure; equivalent to ad libitum

Appassionato. Impassioned

Arpeggio. A broken chord

Assai. Very; Allegro assai, very rapidly

A tempo. In the original tempo

Attaccato. Attack or begin what follows without pause

Barcarolle. A Venetian boatman’s song

Bis. Twice, repeat the passage

Brevissimo. Shortest, almost cut

Bullo. Slowly, sparkling, brilliant

Crescendo. With much spirit

Cantabile. An elaborate, florid passage introduced as an embellishment

Cantilena. In a singing style

Canzona. A short song or air

Carpe diem. Catch the moment, ad libitum

Cavatina. An air, shorter and simpler than the aria, and in one division, without Da Capo

Chord. The harmony of three or more tones of different pitch produced simultaneously

Coda. A composition at the end of a composition

Col or con. With

Crescendo (cresc.). Increasing; increasing in loudness

Da or dal. From

Da Capo (D.C.). From the beginning

Dal segno (D.S.). From the sign

Decrescendo. Diminishing in strength

Dimisiuendo (dim.). Gradually softer

Divisi. Divided, each part to be played by a separate instrument

Dolce (dol). Softly; sweetly

Dolcissimo. Very sweetly and softly

Dominante. The fifth tone in the major or minor scale

Duett or Duettino. A composition for two performers

E. And

Elegante. Elegant, graceful

Energico. Vigorous, energetic

Enharmonic. In place, but different in notation

Espressivo. With expression

Euphony. The conclusion of movement

Fine. The end

Fortissimo. Very loud

Fortissimo (fz). Accent strongly, diminishing instantly to

Fortissimo (fz> f). Very loud

Indicates that a note or chord is to be

Force of tone

Forte (f). With fire; with spirit

Forte (f> f). By degrees; not too loud

Gesto. Exact, in strict time

Grandioso. Great, majestic; pompous

Grave. Slowly and solemnly

Gratioso. Gracefully

Harmony. In general, a combination of tones, or chords, producing music

Hat. The first degree of the scale; the tonic

Key note. The keynote

Largamente. Broadly; slow; the slowest tempo-mark

Legato. Smoothly, the reverse of staccato

Leggerissimo. A small added line above or below the staff

Lento. Slow, between Andante and Largo

Lento. In the same time, (or tempo)

Lento di molto. Place what follows, lengthened, an octave higher or slower

Ma. But

Ma non troppo. Not too much

Maestoso. Greatly dignified

Maggiore. Major Key

Men. Marked

Meno. Less quickly

Mezzo. Half; moderately
HOW TO MAKE YOUR OWN REEDS

While reeds of the best quality may now be obtained in music supply houses, some performers prefer to make their own reeds, and at least some knowledge of the process of reed-making or correcting faults is invaluable. (The figures interspersed refer to diagrams on following page.)

First cut off a piece of cane the thickness of a half dollar coin (1) and of the size of the lay (3). The part of the mouthpiece where the reed is laid and held by the ligature or reed-holder. Then rub the inside part of the cane on a broad fine cut file until the surface is perfectly flat, after which it may be placed on the lay (3) and the screws of reed-holder tightened to ascertain if the opening (5) is correct. Holding the mouthpiece sideways against the light the opening (5) should extend downward about one inch. Remove the reed from mouthpiece and with a sharp knife trim down gradually from centre (6) to top (7) being careful not to take too much off at first as later adjustment must be allowed for. The edges should be rounded from where the cutting begins (8) and show an elongated angle from the middle. The cane should be thicker in the middle (9) than at the edges (10). The thin end of reed can be shaped with a sharp pair of scissors or a reed-cutter. If, on trial, the reed proves too hard, file off the thickness at top of reed, sloping toward edges (11). If the top is already thin enough, file off between the centre (6) and the top (7), but with great care, for should too much be taken off, the tone will be spoiled. Then with a very smooth file file straight across the top of reed to a depth of \( \frac{1}{8} \) of an inch downward; this will leave thin part even and almost transparent. Again place the reed on lay (3) and give a side glance at the opening (5); should it be too close, loosen the top screw of reed-holder and tighten the bottom screw. Reverse the process if the opening is too large. The flat surface of the reed (2) may become warped and uneven, in which case rub carefully on the large file or on the finest sandpaper laid on a perfectly smooth or flat surface, preferably, plate glass.

When left on the mouth-piece for a few days, all the small faults in a reed may vanish; but the real fault may be in the mouth-piece, if located there take the mouth-piece to the maker or a repair shop for refacing.

If the reed still remains too hard, adjust it on lay so as to show a trifle below top of the mouth-piece, (13) if too soft adjust it to show above the top (14), this experiment will at once show the defect. In the first case reduce the reed at end of the curve (15), in the second case, cut off the top (16).

Future warping of the reed may be corrected by using large file or sandpaper, but carefully avoid making reed too thin at the heel (17).
Heel

Ligature or Reed Holder;

Piece of cane cut for one reed

Inside (or the Surface)

The Lay

Mouthpiece Complete
With cane cut ready to be shaped
RUDIMENTS OF MUSIC

Before the student can commence to play any instrument it is necessary that he should be acquainted with the rudiments of musical Notation.

The signs, which indicate pitch and duration of a musical sound, are called Notes figured thus: \( \text{\textbullet} \), \( \text{\textbullet} \), \( \text{\textbullet} \), \( \text{\textbullet} \), etc.

They are named after seven letters of the alphabet; C. D. E. F. G. A. B. and are written on, between, above or below five parallel lines, called the Stave, the names of which are determined by Clefs, placed on different lines.

For this instrument, only the treble or G clef \( \text{\textbullet} \) is used, which is placed on the second line.

The names of the notes on the five lines are:

\[
\begin{align*}
&\text{E} \quad \text{G} \quad \text{B} \quad \text{D} \quad \text{F} \\
&\text{A} \quad \text{C} \quad \text{E} \\
&\text{D} \quad \text{G}
\end{align*}
\]

These eleven notes are insufficient to indicate the full compass of Sounds in use. Ledger lines have therefore to be added, above and below the stave in order to signify higher and deeper sounds.

Notes of the ledger lines above the stave

\[
\begin{align*}
&\text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \\
&\text{A} \quad \text{B} \quad \text{C} \quad \text{D} \quad \text{E} \quad \text{F} \quad \text{G} \quad \text{A} \quad \text{B} \quad \text{C} \quad \text{D} \quad \text{E} \quad \text{F} \quad \text{G} \quad \text{A} \quad \text{B} \quad \text{C}
\end{align*}
\]

Notes of the ledger lines below the stave

\[
\begin{align*}
&\text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \\
&\text{C} \quad \text{B} \quad \text{A} \quad \text{G}
\end{align*}
\]

FULL TABLE OF ABOVE NOTES

\[
\begin{align*}
&\text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \\
&\text{G} \quad \text{A} \quad \text{B} \quad \text{C} \quad \text{D} \quad \text{E} \quad \text{F} \quad \text{G} \quad \text{A} \quad \text{B} \quad \text{C} \quad \text{D} \quad \text{E} \quad \text{F} \quad \text{G} \quad \text{A} \quad \text{B} \quad \text{C}
\end{align*}
\]

DURATION OF NOTES

Notes may be of longer or shorter Duration which is shown by the peculiar form of each note.

Forms of different notes

\[
\begin{align*}
&\text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \\
&\text{Whole note; Half note; Quarter note; Eighth note; Sixteenth note; Thirtysecond note.}
\end{align*}
\]

The latter three kinds may also be written in combination thus:

\[
\begin{align*}
&\text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \quad \text{\textbullet} \\
&\text{Eighth notes; Sixteenth notes; Thirtysecond notes.}
\end{align*}
\]
COMPARATIVE TABLE OF THE RELATIVE VALUE OF NOTES

A Whole note equals 2 Half notes or 4 Quarter notes or 8 Eighth notes or 16 Sixteenth notes or 32 Thirty-second notes

BARS

Notes are systematically arranged into bars, marked by one or two lines drawn across the stave.

One line is placed after each bar and each bar contains the same number of value of notes, and each bar must last precisely the same length of time. The end of a part of a composition is marked with two lines or a double bar, and if either two or four dots are found by the side of the double bar thus: the whole part from the preceding double bar, or if there is no earlier double bar then from the beginning of the piece, is to be played again. This is called a Repeat.

RESTS

Instead of a note a Rest of equal value can be placed.

Whole rest; Half rest; Quarter rest; Eighth rest; Sixteenth rest; Thirtysecond rest.

DOTS

A Dot placed after any note or rest increases its value one half, thus:

is equal to or to or to

Two dots placed after a note or rest increase its value one half and a quarter or like etc.
TRIPLETS, SEXTUPLETS, AND ODD GROUPS

Triplets are marked by a 3 being put over a group of three notes. Sextuplets are marked by a 6 being placed over a group of six notes. Three quarter notes marked thus 时候 must be played in the same time as two quarter notes 时 not so marked; or six eighth notes 时 in the time of four eighth notes 时 not so marked. There are also groups of five [时] seven [时] and nine notes [时] etc.

TIME SIGNATURES

In order to know how many quarter notes, eighth notes or sixteenth notes a bar contains, special figures are placed at the beginning of a movement.

<table>

When a line is drawn through the 时 thus: 时, which is called alla breve, two is counted in a bar.

21443- 时 ©
SCALES

The ladder-like succession of eight sounds, starting from any note and ascending or descending by tones and semitones in regular order, is called a Scale, and each note of a scale is called a Degree.

Between these eight degrees there are seven intervals or distances, five of which are tones, and two semitones.

There are two principal kinds of scales, termed Major and Minor, whose ascension or descension is diatonical: i.e. in tones and semitones, and a third kind, whose ascension and descension is chromatic: i.e. only in semitones.

For the present, only the Major scale will be discussed. In the Major scale the semitones are situated between the third and fourth and the seventh and eighth degrees of the scale.

EXAMPLE

<table>
<thead>
<tr>
<th>1st</th>
<th>2nd</th>
<th>3rd</th>
<th>4th</th>
<th>5th</th>
<th>6th</th>
<th>7th</th>
<th>8th</th>
</tr>
</thead>
<tbody>
<tr>
<td>tone</td>
<td>tone</td>
<td>semitone</td>
<td>tone</td>
<td>tone</td>
<td>tone</td>
<td>semitone</td>
<td></td>
</tr>
</tbody>
</table>

Each diatonic scale derives its name from the name of the note on the first degree or the root.

There are twelve major and twelve minor scales; but not to burden the student with their combination at present, only the scale of C will be given.

The distance from one note to another is called an Interval. Two notes placed on the same degree do not produce any interval, they are said to be in Unison.

The intervals are named: the Second, the Third, the Fourth, the Fifth, the Sixth, the Seventh, the Octave, etc.

EXAMPLE

<table>
<thead>
<tr>
<th>Degrees:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Intervals:</th>
</tr>
</thead>

<tr>
<td>Second, Third, Fourth, Fifth, Sixth, Seventh, Octave</td>
</tr>
</tbody>
</table>

SHARPS

A scale may be formed on any note, but in order to produce semitones between the third and fourth and seventh and eighth degrees in any order but the scale of C major, it is required to employ certain characters, which raise degrees, or restore the pitch of any note in the scale.

One of these characters is called a sharp (#), which, when prefixed to a note raises it a half tone.

The number of sharps employed in a scale depends upon which note the scale is founded.
The sharps succeed each other in the following order:

\[
\begin{array}{cccccccc}
1 & 2 & 3 & 4 & 5 & 6 & 7 \\
\text{F sharp, } & \text{C sharp, } & \text{G sharp, } & \text{D sharp, } & \text{A sharp, } & \text{E sharp, } & \text{B sharp.}
\end{array}
\]

Thus it will be seen that if one sharp is employed it must be prefixed to F; consequently all F's in that piece must be raised half a tone. When two sharps are employed all F's and C's must be raised, and when three sharps are employed all F's, C's and G's must be raised and so on.

**TABLE OF SIGNATURES OF SHARP KEYS**

<table>
<thead>
<tr>
<th>Number of Sharps</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Names of the Keys</td>
<td>G</td>
<td>D</td>
<td>A</td>
<td>E</td>
<td>B</td>
<td>F#</td>
<td>C#</td>
</tr>
</tbody>
</table>

**FLATS**

A flat (b) prefixed to a note lowers it half a tone. The flats succeed each other in the following order:

\[
\begin{array}{cccccccc}
1 & 2 & 3 & 4 & 5 & 6 & 7 \\
\text{B flat, } & \text{E flat, } & \text{A flat, } & \text{D flat, } & \text{G flat, } & \text{C flat, } & \text{F flat.}
\end{array}
\]

The same rule concerning signatures as with sharps is to be observed here.

THE MINOR SCALES

Every major scale has its relative minor, the root of which is to be found on the sixth degree of the major scale. Both scales bear the same signature. There are two kinds of minor scales, the harmonic and the melodic form.

THE MELODIC MINOR SCALE

The ascending of the melodic minor scale differs from the descending, the former having its sixth and seventh degree raised by accidentals not essential to the key. In the ascending, semitones are situated between the second and third and the seventh and eighth degrees, and in the descending between the sixth and fifth and the third and second degrees.

SCALE OF A MINOR

THE HARMONIC MINOR SCALE

The Harmonic Minor Scale differs from the Melodic, as only its 7th degree is raised by an accidental, which remains, whether ascending or descending.

SCALE OF A MINOR
THE NATURAL ♭

In order to restore a note which has been raised by a sharp(#) or lowered by a flat(b), a Natural(♮) is employed which restores it to its original pitch.

Thus \[ \text{♭} F \] raised by a sharp is restored by the natural \[ \text{♮} \] to its original sound.

or \[ \text{♭} B \] flat to \[ \text{♮} \] B natural.

THE DOUBLE SHARP ♭

By prefixing a double sharp ♭ to a note the same must be raised a whole tone.

Thus F double sharp \[ \text{♯♯} \] will sound like G natural \[ \text{♮} \]

THE DOUBLE FLAT ♭

A double flat ♭ prefixed to a note depresses the note a whole tone. Thus \[ \text{♭♭} \] (double flat) will sound like A natural \[ \text{♮} \]

THE PAUSE ©

A Pause © placed over a note, means that the note can be sustained to an indefinite length at the performer's pleasure; the counting being interrupted.

THE CHROMATIC SCALE

Consists of a succession of semitones, which, in ascending are designated by sharps, and in descending by flats.

Thus:

\[ \text{♯} \] etc.

\[ \text{♭♭} \] etc.

21443 ©
ABBREVIATIONS

Abbreviations are employed in written music to avoid repetitions of a single note or passage.

Thus instead of writing four eighth notes: \( \frac{4}{8} \) a half note marked with a thick line: \( \frac{1}{2} \) will indicate the same.

Or \( \frac{1}{4} \) for \( \frac{4}{8} \) or \( \frac{2}{8} \) for \( \frac{4}{8} \) or \( \frac{1}{2} \) for \( \frac{4}{8} \) etc.

and \( \frac{1}{4} \) for \( \frac{4}{8} \) or \( \frac{2}{8} \) for \( \frac{4}{8} \) or \( \frac{1}{2} \) for \( \frac{4}{8} \) etc

Or instead of repeating a bar alike a sign marked thus \( \frac{4}{8} \) is used: \( \frac{4}{8} \) etc

TRANSPOSITION OF THE KEYS

When C is taken as 1, the scale or key is said to be in its natural position; but either of the other letters may be taken as 1, in which case the scale is said to be transposed. As 1 is the basis of the scale, the foundation on which it rests, so the letter which is taken for this sound is called the Key-note. Thus, if the scale be in its natural position, it is said to be in the key of C; if G be taken as 1, the scale is in the key of G; if D be taken as 1, the scale is in the key of D; and so on with the rest of the seven letters; which ever letter is taken as 1, that letter becomes the key-note of the scale.

In transposing the scale, the order of the intervals or tones and semitones, must be preserved. Thus, the interval must always be a tone from 1 to 2, a tone from 2 to 3, a semitone from 3 to 4, a tone from 4 to 5, a tone from 5 to 6, a tone from 6 to 7 and a semitone from 7 to 8. The interval from one letter to another letter is also the same and cannot be changed—thus it is always a tone from C to D, and from D to E, a semitone from E to F, a tone from F to G, from G to A, from A to B, and a semitone from B to C. In the transposition of the scale therefore it becomes necessary to introduce sharps and flats, or to substitute sharped or flatted letters for the natural letters, so as to preserve the proper order of the intervals.

First transposition by sharps from C to G, a fifth higher, or a fourth lower.

The same method is followed in the transpositions by sharps, viz: the fifth above or the fourth below is taken as 1 of a new key in every succeeding transposition and an additional sharp will be required in every succeeding transposition.

To transpose the scale by flats, we take the fourth (instead of the fifth) of every new scale. F is the fourth of C; hence it is 1 of the new scale (key of F). The order of intervals must be the same in the flat key as in the sharp; hence the B must be made flat.
It is clear that there must be a tonal difference between the third from C to E and the third from E to Eb. It has been stated that the tonal difference between two notes on adjacent degrees of the staff is not always the same, likewise intervals of a third, fourth, etc., vary as to tonal content. The third from C to E is called a Major (Large) Third (2 full Tones), that from C to Eb is called a Minor (Small) Third (1 tone and a Semi-Tone). This classification of intervals belongs properly to the study of Harmony and does not necessarily concern the student now. It will be sufficient to make the transposition by intervals as directed, and remember the scale of the new key we are playing in.

DIFFERENT SHADES OF TONE

- P means: piano, soft
- PP means: pianissimo, very soft
- F means: forte, loud
- FF means: fortissimo, very loud
- mf means: mezzoforte, moderately loud
- Cresc. or —— means crescendo, increasing the sound
- Dim. decresc. or —— means diminuendo, decrescendo, diminishing the sound
- sf, rf or > means sforzando, rinforzando, sharply accentuated
- fp means: forte-piano, loud and immediately soft again

GRACES, EMBELLISHMENTS OR ORNAMENTS OF MELODY

THE APPOGGIATURA

The appoggiatura is a grace note placed above or below a principal note. When it is placed above, it is always at the interval of either a tone or a semitone. When it is placed below the principal note it should always be at the interval of a semitone. When the appoggiatura is written so the value of it is one half of the following note.

When crossed by a small line, thus: its value is but one fourth of the note that follows it.

EXAMPLES

Written thus:

Played thus:

There is also a double appoggiatura which is composed of two grace notes placed: the first, one degree below the principal note, and the second, one degree above.

Written thus:

Played thus:
THE GRUPPETTO OR TURN

Is composed of three grace notes placed between or after a principal note. The turn is marked thus: ∞. A small sharp placed under some of the signs thus: ♯ indicates that the lowest of the three grace notes is sharpened. Should the sharp be placed above the sign thus ♩, the upper grace note must be sharpened; or in case of a sharp above and below the sign ♩, the upper and lower grace note must be sharpened. The same rule applies to flats, only that the grace notes must be lowered half a tone in that case.

EXAMPLES

As written

As played

With sharps and flats

THE PASSING SHAKE

The passing shake, often written thus ♯, must be played quick and round in the following manner:

As written

As played

THE SHAKE

The shake or trillo, marked thus ♩ consists in the alternate repetition of the note marked, with the note in the next degree above it.

EXAMPLE

Improvements added to the Evette and Schaeffer System of Saxophones.

First New Patent Key of High Eb and F.

The notes Eb and F above the staff are obtained upon all Saxophones by using simultaneously three or four keys; the hand to catch these keys must quit its natural position; and to return again is very difficult.

With Evette and Schaeffer's new patent key A they suppress that difficulty as shown in the following examples.

The key A shuts automatically the plate (or plateau) of the first finger.

It is very easy to see the many advantages of this new fingering.

Second New Patent Eb Key.

The passing from B\#, C\# and C\# to Eb is very difficult on all Saxophones, and requires great practice and study; various mechanisms have been tried in remedying this inconvenience; Evette and Schaeffer claim they have thoroughly succeeded by obtaining the emission of the Eb through the hole of the Eb.

The Eb is obtained by lowering the plate 5bis with the second finger right hand, third finger being raised. The little finger, which usually takes the Eb key, thus remains free and the passing from B\#, C\# and C\# to Eb becomes quite easy.

Note: See Exercises for this new fingering on page 75.

Last Improvement on the Evette and Schaeffer System of Saxophones.

Three New Patent Keys for the Low B\#, B\# and C\#.

Owing to the successive improvements made by them to the Saxophone, the fingering of that instrument has become very easy.

But it remained yet a question to be solved, viz: how to be able to obtain the low notes with both hands. However, nothing was more easy, but that ought to be met with.

Such question to-day was solved out, since, without any new mechanism, the three notes, low Bb, B\# and C\# made by the little finger of the left hand, are also made with the second (or middle) finger of the right hand, by means of three double spatulæ.

It is easy to account for the fact that; since these three notes are made indifferently with both hands, thence all the most difficult passages become very easy to be made out.

Note: See Exercises for this new fingering on pages 197, 198, 199 & 200.
Preparatory Exercises
For the Production of Tone and Forming the Embouchure.

Note: It is taken for granted, that, the Student has already made himself acquainted with the Rudiments of Music.

Observation: Each note, in the following exercises, should be touched softly with the tongue by pronouncing the letter T; the breath must be emitted evenly, so as to produce a long and equal note.
Each exercise between repeat-bars should be repeated till the execution is perfect; and be finished with the note surmounted by the pause: (_ci).

Exercises.

Pronounce the letter T for each note. Breath should be taken at the sign: (ci).

Major and Minor Scales in all Keys.

A thorough knowledge of the scales in all keys is most important; the ability to perform them all with equal facility is an absolute requisite to a really good performer.

Every scale should therefore be studied in the following manner: Commence by playing it slowly at first; repeat it many times and at each repetition increase the time slightly. In the keys with several sharps or flats, more especially in those the signatures of which consist of four or more accidentals, the fingering of some intervals is difficult, on account of the mechanism of the instrument. These awkward intervals should be repeated over and over again until an easy mastery over them is secured. No pupil should rest satisfied as long as he finds any interval of a scale a stumblingblock to its easy and perfectly smooth execution.

Rapid tonguing (staccato) is very difficult, and can only be acquired by patiently exercising the tongue, making it a point to increase its flexibility by daily practice.

Sixty Exercises of Mechanism.

The exercises of mechanism have for their object the formation of the fingering by habituating each finger to act separately or simultaneously.

By these exercises may be acquired that equality of fingering and that purity of tone which are the finest qualities of an Instrumentalist.

In the following exercises the student must accentuate the sound upon the first note of each division of the bar.

Each bar or each sketch should be played eight or ten times and as a finish play the note after the dotted double bar.

All the notes should be slurred, ascending passages played crescendo, descending passages diminuendo. (See exercises on Shading, pages 29 and 30).

Take breath after the first note in the bar.

Allegretto.
Grace-notes and Embellishments.

These are of considerable variety, and consist of simple grace-notes, (appoggiatura), double grace-notes, (double appoggiaturas); the turn, (Gruppetto) indicated by the sign ∞ or дресt and consisting of three or four notes of a fixed order, and gruppettos of more than four notes. With reference to the longer ornamental phrases, or Gruppettos, it is necessary to state that the manner of writing them has gradually undergone great alteration. Formerly the simple Melody was written in full notes, and all the embellishments in half-sized ones, (called by the general name of: grace notes); but in our time the composers prefer to write embellishments in full notes, thus making them an integral part of the Melody.

A further ornament is the short, or passing Shake, (Mordente,) indicated: \(\triangledown\), and the full Shake, or Trill, indicated thus: \(\triangledown\), an abbreviation of the Italian word "Trillo".

Lastly there is the Cadenza, an elaborate ornamental phrase, mostly performed as a grand final climax to bravura pieces. In ancient music the Cadenza was left to the inventive genius of the singer or instrumental performer, and merely indicated thus: \(\begin{array}{c} \text{Cadenza.} \\
\end{array}\); but at present composers prefer to write the Cadenzas in full.

As a rule ornaments should not be added by a performer except where they are indicated by the Composer. Some ordinary performers are under the delusion that it "shows off" a player if he can "beautify" a piece with grace-notes and shakes, and trembling breath, and other means. This is offensive to good musical taste, and amounts to mere vulgarity. But when embellishments are introduced at the right place, and performed by an "artist," their style of execution furnishes a criterion for the estimate of the artist's schooling and delicacy of feeling.

Examples.

Grace-note, or Appoggiatura.

The most frequent "Appoggiatura," (literally "jammed note!") is written thus \(\begin{array}{c} \text{Allegretto.} \\
\end{array}\), with an oblique stroke through stem and hook.

This is invariably played very quickly.

\begin{array}{c}
\text{Example:}\n\end{array}
But there are cases, more especially in ancient music, where the grace-note has no stroke through the stem. These are to be played as if they were written in full notes, the time value of which is to be taken from the note to which it is slurred. Per example, if the grace-notes in the preceding exercise had no strokes through the stems:

Appoggiaturas of various durations.

Andante.

Moderato.

Exercise.
The "Double Appoggiatura" or Double Grace-note.
Is always performed rapidly, and its value is deducted from the preceding note, so that the following note falls exactly upon the time-beat.

Exercises.

Written.

Played.

Exercise.

The "Turn," (Grupetto).

May be of three, four, or even five notes, upwards or down, written in full or by the signs \( \infty \) (upwards) or \( \circ \) (down). Any accidental over or under the sign, \( \# \# \# \# \), indicates that the highest or lowest note of the turn should be either \( \# \) or \( \flat \), as indicated. Its time-value is always taken from the preceding note.
Andantino.

When the Turn is between similar notes, it always consists of three notes.

When it is placed between ascending notes, it consists of four notes. (Upward turn.)

When it stands between descending notes, it consists of four notes, the first of which is the lowest, and the third the highest. (Downward turn.)

It must, however, be remarked that there is no absolute rule, and it depends upon the artistic conception of the performer, whether he prefers the upward or downward execution of an indicated turn.

The preceding exercise is to be performed in the following manner:

Andantino.

Gruppettos of more than four notes are not so frequent, but examples by Rossini and other composers will be found in operatic melodies, and also some Cadenzas.
The Shake.
(Trill.)

This is indicated by the sign tr, an abbreviation of the Italian word: Trillo, (trill,) and consists of a rapid alternation of the note over which the sign tr is placed, with the next note above.

The shake may consist of a full tone, or a semitone, according to the key of the piece, and the position of the note in the scale of the key. Shakes present little trouble if they are executed with the first or second finger; but much greater difficulty is experienced if they are to be done by the third, and more so with the fourth or little finger. This is due to the anatomical construction of the hand; the ability to execute a good shake with the latter two fingers can only be acquired by persevering exercise, and great trouble has to be taken to equalise the rapidity of all fingers; a few shakes have even to be performed by the thumb. Every shake must be practised at first slowly; and the rapidity of the finger should, in the daily exercises be increased gradually, until the required speed is attained. The close or end of a shake should consist of a turn.

Table of Shakes.

Copyright, 1907, by Carl Fischer, New York.
Two ways to shake A♭ with B♭.

1st keep the A♭ opened and the left hand plates closed and move the key VI.

2nd take the new B♭ (Feette and Schaeffer System) keep the A♭ opened and move together the plates No. 2 and 3 of the left hand.

Keep the plate of C closed, the key VI being opened and move the plate No. 1 left hand.

The C with the key V♭bis
Keep the plate of C closed and move the key IX.

All the plates opened and move the key N9 VIII. Move together the keys VIII and IX.

Keep the key of D and move the key of Fb.

You can play a succession or chain of shakes up or down without ending, keeping the end for the last shake of the succession or chain.

Example.

You can play a succession or chain of shakes up, in adding an end at each shake.

Example.
The Mordent, or Passing Shake.

A brief shake, indicated thus \( \wedge \), consists of a few rapid alternations of the note with the one next above it, having neither beginning nor end. They occur mostly in rapid movements.

**Examples.**

**Allegro.**

Seventeen Exercises on Syncopation.

1.

2.

3.

4.

5.
Syncopation between two Eights.
The note preceding the syncopation must be separated, and the quarter well marked.

Three Syncopated Notes preceding a Half-note.
Syncopated Slurs.

The accent must not be made by the throat, but by the action of the finger falling like a hammer on the hole.

The first eight measures which are slurred should be played with one breath until the rest. But should the movement be two slow, breath can be taken after the quarter-note preceding the syncopation.

Moderato.

Allegretto.

Allegretto.
Twenty Operatic Melodies
for the study of phrasing and artistic delivery.

Compiled by PAUL de VILLE.

It is difficult to give verbal instructions how to perform in an artistic style. The great point consists in delivering a melody as if it were rendered by a great Singer. The student should utilize every opportunity to hear good vocal artists and model his delivery of "Cantabile" pieces after their example. Of course there are many artistic details for an instrumentalist which lie outside the vocal art, and ought to be imitated from the performances of the best instrumental performers.

Especial care should be taken with the articulation; the tongue must touch the reed in staccato passages at the very tip, crisp and clear. If the articulation is produced by the tongue covering too much of the reed, the tone will be forced and vulgar. The dynamic shadings should be clearly brought out, without resorting to extremes; vibrating the breath ought to be strictly avoided, and the "roulades" (long vocal passages) must be fingered with the greatest precision, so that no break occurs.
